Welcome to... ANYWHERE

ON PHONE
by Communications Solutions UK

Anywhere from On, brings something totally new to Mobile with multi-network connections, live failover between networks based on signal strength and fully compliant call and text message recording.

Anywhere introduces Hosted Mobile into the On portfolio. You have one multi-network SIM card. This maintains a permanent connection to the cloud-based On-Phone Hosted Telephony platform. The SIM constantly switches to the strongest mobile signal. Whats more, the service isfully compliant with both the existing PCI and the new MiFID II compliance standards coming into force in 2018.

O2 EE vodafone

Making mobiles an extension of your company telephone system

As a stand-alone mobile solution, or as part of a company wide deployment of the On-Phone hosted telephony platform, your mobile has never been more versatile.

Uniquely the multi-network SIM can use 01, 02, 03, 08 numbers, and tier one 07 numbers with full number porting, both in & out.

A mobile or remote worker can appear to be at a desk in the head office with a DDI, without forwarding or other rules having to be applied.

When making a call or using data, the multi-network SIM connects to the strongest available signal in that area. If the call drops due to poor signal or mobile mast over-subscription, then the SIM connects to the next strongest available network and the call can be redialled and continued.

Regardless of network used, you receive one bill, for a fixed price, directly from On-Phone.
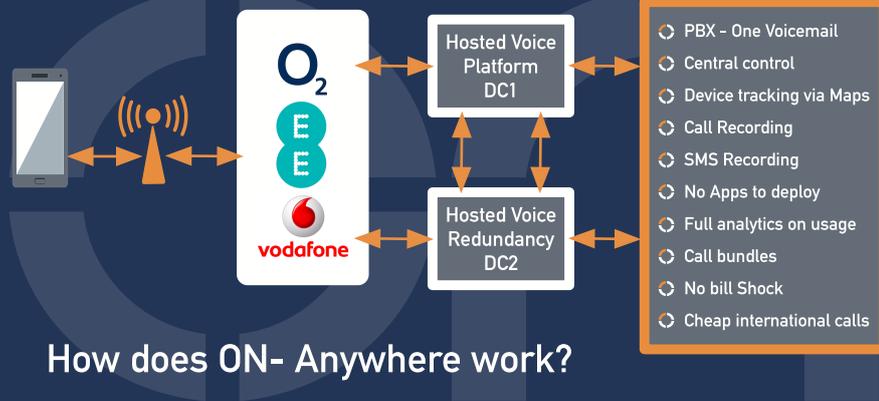

Connection agreements with O2, Vodafone and EE, ensure you have fantastic UK coverage. With even more networks to come!

Who needs Anywhere?

The On-Mobile Anywhere service integrates fully with the On-Phone telephone system. This means that lone workers, care workers, doctors, emergency services, solicitors, financiers and field engineers using mobile phones have the security and benefits that your office based workers have.

In addition, you can take up the option to have all their calls and SMS messages recorded, providing full PCI and MiFID II compliance.

The On-Mobile Anywhere platform is the perfect tool to evidence legal submissions, verbal agreements, payment handling and to provide staff/customer protection.

How does ON- Anywhere work?
